

# Launceston Airport check-in Column Paneling

## Project Details

<b>Client</b>	Walker Designs
<b>Time Frame</b>	Aug 2016
<b>Industry</b>	Architectural

Wrapping of the columns in the check-in area of the Launceston airport in 3mm powder coated steel paneling, laser cut with designs associated with the local area.

Hired by Walkers Designs, CPT Engineering was to laser cut fabricate powder coat and install paneling onto 5 existing columns in the check-in area of the Launceston Airport.

After the panels were laser cut with the pattern and folded, they were powder coated and delivered to site. CPT installed the panels around the columns to create a great looking feature in the departure hall of the Launceston Airport.
